(For release prior to or at EAGE Paris) June 6th 2004

Ikon Science the innovative software commercialiser, headquartered in London, England, announced a software agreement for the new RokDoc[®] version 4 with Shell International Exploration and Production BV (Shell) to be included in its global software portfolio and deployed for worldwide use by Shell and Affiliates of Shell engaged in Exploration and Production activities.

RokDoc[®]

IKON's RokDoc[®] innovative software and training enables seismic interpreters, geologists and petrophysicists to make faster and better interpretative decisions in exploration and production by rapidly combining well logs and seismic information to make quantitative predictive models.

RokDoc[®]'s versatility, flexibility and world class training gives better understanding of the link between petrophysics and geophysics and allows subsurface interpreters to reduce risk and optimise exploration, development and production decisions.
